SEARCH · COLLECTION · APPLICATIONS

Work is where the big job boards *don’t reach.*

roleorienta finds employers, collects their jobs from the state job portal, the job board and **their own recruiting systems**, and brings you only the ones that fit — every hour, without duplicates.

How it works → Features

- One job — one record
- New jobs every hour
- Applications in one place

7 new since your last visit

Sample job card. Data shown schematically.

WHY ORDINARY SEARCH ISN’T ENOUGH

You simply don’t see some of the jobs that fit

A BLIND SPOT

Large employers publish jobs in **their own recruiting systems** — Workday, SuccessFactors and others; smaller ones only on the state portal. Many never reach the big job board.

YOU CAN’T COVER IT BY HAND

To avoid missing them you’d have to know hundreds of companies, find where each one posts and **check them all regularly**. That’s hard to keep up for long.

A CLUTTERED FEED

The same job appears on the portal, on the board and at the employer; agency ads and stale listings mix in. It’s hard to tell **what is new and what is one job**.

EVERYTHING IS SCATTERED

Applications, replies and interviews are spread across spreadsheets and bookmarks. Pulling it together is a job in itself.

WHAT ROLEORIENTA DOES

Four things the big job boards do poorly

roleorienta works in depth: it goes from the company register to each employer’s own channels — and brings back one clean list.

01

Finds the employers

From the national company register to the company’s site, its careers section and its recruiting system — on its own.

02

Every channel, one record

The state portal, the job board and the employer’s system are read together; the same job found three times is shown once.

03

Data you can trust

No guesses: what isn’t known isn’t shown. A failed check never closes a job; old listings step aside.

04

Professions, not keywords

Positions follow the international ISCO-08 / ESCO classification, so “Programátor” and “Software Engineer” land in one place.

HOW IT WORKS

From the first job to the interview result

Four steps — all in one clear interface.

A DESCRIBE WHAT YOU’RE LOOKING FOR

Results right away, not a blank screen

Choose countries, work format and positions — professions from the classification or precise positions like Java developer. Every matching job already collected appears at once.

B NEW JOBS EVERY HOUR

The search keeps running without you

Collection never stops; every hour new matching jobs join your results, and jobs that arrived since your last visit are marked.

C WORK THROUGH THE RESULTS

Find, open, decide

Search by employer or position, narrow to one of your positions, open the original posting, mark ✓ applied or × not interested — with a few seconds to undo.

D TRACK APPLICATIONS

Every step of the search — in one place

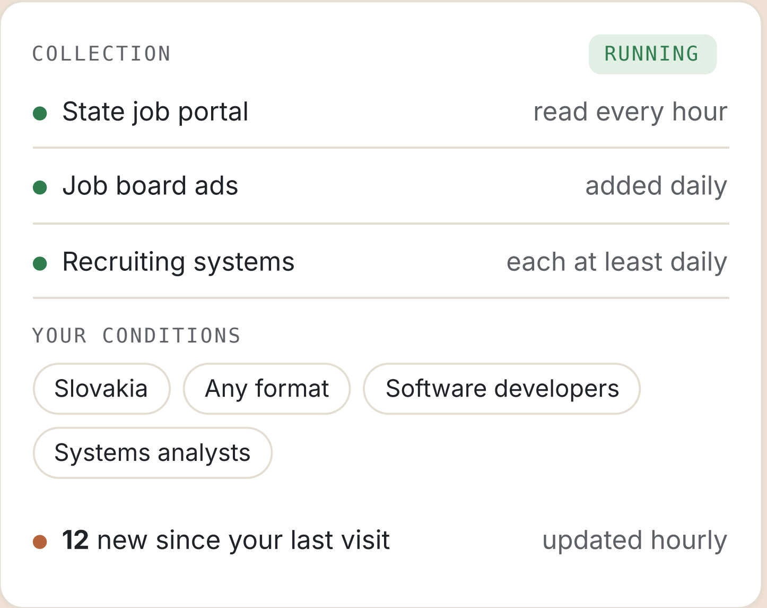
Applied, interview, no reply for 3+ weeks, completed: your applications sorted by state, with the history of every change. You always apply yourself.

WORKS WITHOUT YOU

New jobs every hour

The app reads the state portal, the job board and every connected recruiting system on its own — politely, within each site’s limits and robots.txt — and adds new matching jobs to your list every hour.

- ✓ Your conditions are saved: change them, and the list is rebuilt from everything already collected.
- ✓ “New since last visit” shows only what arrived while you were away.
- ✓ An email digest with a frequency you choose is built and switches on with the server stage.



COLLECTION RUNNING

● State job portal — read every hour
● Job board ads — added daily
● Recruiting systems — each at least daily

YOUR CONDITIONS
Slovakia · Any format · Software developers · Systems analysts

● **12** new since your last visit — updated hourly

FEATURES UP CLOSE

Data you can trust

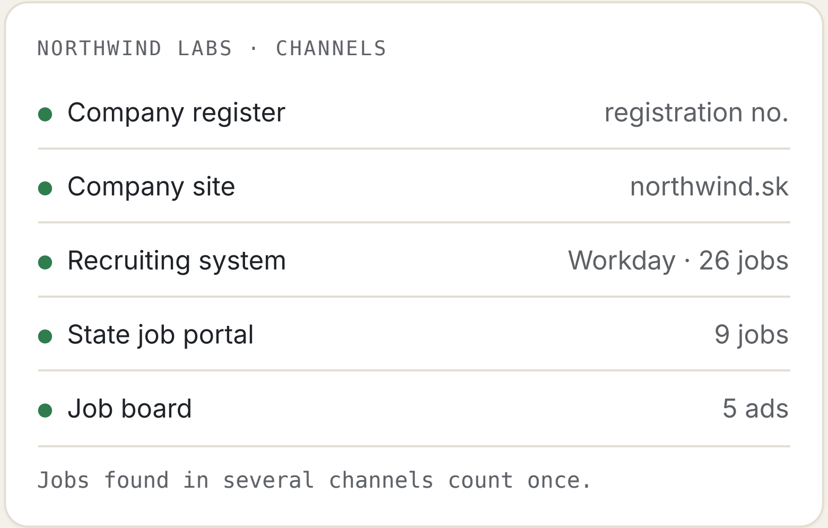
Every feature follows one principle: show the data accurately and clearly, without guesses.

WHERE THE JOBS COME FROM

All the channels an employer uses

The state portal brings small and mid-sized employers together with the job-board ads it links to them; large employers are read in their own systems, found automatically from their site or from the “apply” button of a board ad.

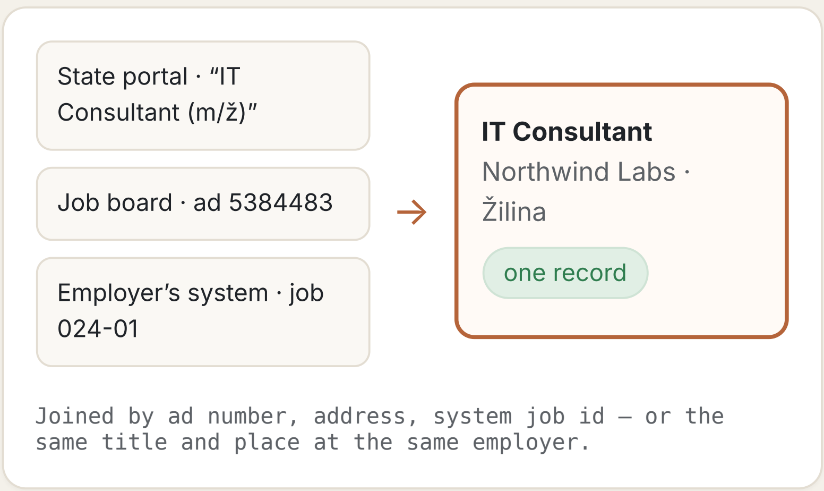
- ✓ Ten recruiting-system formats: Workday, SAP SuccessFactors, Oracle Taleo, Oracle Recruiting Cloud, Greenhouse, SmartRecruiters, Personio, Phenom, Nalgoo, schema.org JobPosting.
- ✓ Company career pages without a system are read as they are.
- ✓ Access restrictions and CAPTCHAs are never bypassed.



NORTHWIND LABS · CHANNELS

● Company register — registration no.
● Company site — northwind.sk
● Recruiting system — Workday · 26 jobs
● State job portal — 9 jobs
● Job board — 5 ads

Jobs found in several channels count once.



State portal · “IT Consultant (m/ž)”
Job board · ad 5384483
Employer’s system · job 024-01

→ **IT Consultant**
Northwind Labs · Žilina
one record

Joined by ad number, address, system job id — or the same title and place at the same employer.

ONE JOB, ONE RECORD

The same job never shows up three times

A job published on the portal, on the board and in the employer’s system is one entry in your results — and it closes only when it is gone from every channel.

- ✓ A source that is down or read only partly leaves its jobs open.
- ✓ A job closes after it is missing from several complete reads in a row.
- ✓ Jobs the employer published more than 4 months ago step aside.

RESULTS

Find the job you need in seconds

Search your results by employer or position, narrow them to one of your positions, and decide right in the row.

- ✓ Search ignores case and diacritics: “zilina” finds “Žilina”.
- ✓ Position chips show how many jobs match each of your positions.
- ✓ ✓ Applied and × Not interested come with a few seconds to undo.

MY APPLICATIONS

ACTIVE · 3
● Senior Backend Engineer — Interview · 10 Nov
● IT Consultant — Applied · 8 Nov
● Platform Engineer — Applied · 4 Nov

NO REPLY 3+ WEEKS · 1
● Java Developer — Applied · 14 Oct

COMPLETED · 2
● DevOps Engineer — Employer declined

APPLICATION TRACKING

From application to outcome — nothing gets lost

Mark a job as applied, move it to interview or employer declined — every change is kept in the job’s history, and your applications sort themselves by state.

- ✓ Active applications on top; silent ones after 3 weeks; completed ones below.
- ✓ A job closed by the employer stays in your applications with a mark.
- ✓ Dismissed jobs wait in “Not interested” and can be returned.

WHAT’S NEXT

Planned on the roadmap

The current version is the MVP for Slovakia. These features are planned and not part of it yet.

PLANNED

Company monitoring

Pick the employers you care about and follow their jobs.

PLANNED

Change history

See how requirements, salary and terms of a job changed over time.

PLANNED

Salary as in the job

Amount or range, currency, period, gross or net — and a filter that compares only comparable figures.

PLANNED

Skills and technologies

A job’s technologies matched against yours, and what an employer asks for most often.

PLANNED

Application details

A copy of the job as it was when you applied, stages, notes, dates and interview outcomes.

PLANNED

More countries

The app isn’t tied to one market; new countries follow after the server stage.

GOOD TO KNOW

Questions that matter

Do you promise every job on the market?

No. Coverage grows with the sources and formats the app can read, and it is honest about the rest. The administrator sees which companies lose jobs and closes the gaps one by one.

Where does the data come from and how current is it?

From the state job portal, the job board and employers’ own recruiting systems and career pages. Sources are read at least once a day, the portal hourly; your results are updated every hour.

Why don’t I see the source and the last check date?

By design: what matters to you is getting the job in time, not which channel it came through — often it came through several. You see when the job was opened and whether the employer closed it, and the link takes you to the original posting.

How does the app know a job is my profession?

From the employer’s code on the state portal, the job board’s position, the position dictionary, or the similarity of the title to titles with a known profession. If none of them is sure, the job isn’t guessed into your list.

Can I add a company the app missed?

Yes. Find it in Companies and add the address of its career page: the app checks it and starts reading it.

Do you send applications for me?

No. You always apply yourself; the app only keeps track of what you did.

Are my applications private?

Yes. One user can’t see another’s conditions, lists or marks, and collection works without any user data.

YOUR NEXT STEP

Start seeing jobs *that others don’t.*

Describe what you’re looking for once — and get new matching jobs every hour, from every channel employers use.

FOR THE CANDIDATE

Describe what you’re looking for

Countries, positions, work format — and results right away, including jobs from employers’ own systems.

APPLICATIONS

Keep the whole search in one place

Mark what you applied to, follow replies and interviews, and return to anything you dismissed.

roleorienta

An app for finding and collecting jobs from every channel employers use. Illustrations on this page are schematic; company names, numbers and dates are shown as examples.
